

## The Goals of our Modeling the Molecular World workshop are:

- 1** Explore the molecular world of protein biochemistry through an exploration of recent research and “molecular stories”.
- 2** Connect the macroscopic world with the invisible world of molecules through the use of a variety of models, including physical 3D models, gene maps, animations and computer visualization programs (Jmol and Jmol tutorials) to facilitate an understanding of the molecular world.
- 3** Foster the development of a community of educators.
